

NARK

Networked Automated Records Keeping

Convenient Organization

NARK is a software application that was developed for local law enforcement. Many applications currently being used at a local level group information based on category, such as warrants, traffic accidents, or transports. NARK was designed to organize information based on individuals instead of by service.

This variation allows a police officer to enter an individual's name, social security number, or other unique identifier into the system and see all police matters related to that individual. For example, if someone comes into the sheriff's department to request a copy of an accident report, the individual processing the request can enter the person's name to find the accident report and also see if that person has a warrant out for his arrest.

This program can significantly increase department efficiency by saving time and money. It can also increase the arrest rate for warrants by making that information readily available whenever you look up an individual.

Program Features

Box Lake Networks understands that there is a significant amount of paperwork involved in law enforcement. NARK was designed to make the most common tasks involving that information as quick and easy as possible.

Report Generation

NARK has the capability to generate detailed reports on any of the information entered into the program. For example, one of the common tasks performed by local law enforcement is transports. NARK is able to keep detailed accounts of transports because being able to document the time taken and the mileage to and from a location each time a transport is completed allows officers to better track the funds they should be receiving for those services.

NARK allows you to generate reports on services that have not been completed, so that they can be assigned to particular officers. You can also report on warrants that have or have not been served, all services completed by a particular officer and much more. All of these options offer the ability to monitor the activity in your department on a daily, monthly, or yearly basis.

Search Capabilities

NARK was designed to aid departments in finding the information they need quickly and easily. The manual filing system that many departments currently use can be difficult to navigate. If a report is accidentally filed incorrectly, the chances of finding that report again when it is needed are slim.

With NARK, reports, citations, and other important information are all entered into the program. Once that information has been entered, criteria can be entered into the search field in order to find the file needed. NARK also provides further flexibility by allowing you to add information to existing records. This process drastically cuts down on the time it takes to file and search information in the office.
